No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, particularly polkilothermic fish, against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents P. salmonis OspA DNA termed C17E2 optimised for expression in Escherichia coli fused to DNA encoding an undefined N-terminal fusion partner. The protein encoded by this fusion construct is used in a vaccine to create an anti-OspA antibody response.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Вb
This invention relates to a method for the protection against infection of a poikilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals
                                                                                       Method for protecting poikilothermic fish against salmonid rickett septicaemia and other rickettsial diseases comprises administering vaccine containing the OspA protein of Piscirickettsia salmonis
                                                                                                                                    P-PSDB;
                                                                                                                                                                                                     (KAYW/)

This invention relates to a method for the protection against infection of a poikilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals particularly poikilothermic fish, against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents DNA encoding the P. salmonis OspA protein. An OspA protein with an N-terminal fusion partner is used in a vaccine to create

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       427
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              367
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 649
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       307
```

The present invention relates to methods and compositions for cross-linking and/or modifying the properties of polysaccharide materials. The method involves treating the polysaccharide structure with a polysaccharide binding domain (PBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and

ior cross-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains the fine fibers in a slurry therefore resulting in better recovery of raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to
                                                                                                                                                                                                                                                                                                                                                                                                                                              Polysaccharide modification; polysaccharide binding domain; PBD; paper; yarn; fiber; textile; biological crosslinker; mechanical property; wet strength; durability; elasticity; cellulose binding domain; CBD;

The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains the fine fibers in a slurry therefore resulting in better recovery of raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to methods and compositions for cross-
linking and/or modifying the properties of polysaccharide materials.
The method involves treating the polysaccharide structure with a polysaccharide binding domain (PBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (CBDT-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequ

                                                                                                                                                                                                                                                                                                                                                            C AAQ72917/R63634 is a novel isolated cellulose binding domain. It pref. C binds crystalline with a Kd ranging from 1.5 microM - 0.5 microM, C pref. with a Kd of <1.2 microM, esp. <1.0 microM. The protein and C comprising DNA are claimed, as is a CBD fusion protein (FP) C emprising the CBD and a second protein. The second protein is pref. C Protein A, heparinase, a hormone or an enzyme capable of degrading C an environmental pollutant, or an HSP, HSP antibody, cross-reactive MSP-related protein or an antigenic portion of this. The CBD and FP cellingues. CBD nucleic acid may be used in drug delivery, affinity sepns. and diagnostic techniques. CBD nucleic acid may be obtd. from a variety of cell cources that produce CBDs that bind with high affinity and in a reversible manner or that produce CBD encoding mRNA. The preferred xxx

                                                                                                                                                       CbpA protein of Clostridium cellulovorans. The sequence is used the construction of a fusion protein which can be used in diagnostic immunoassays, e.g. to detect heat-shock proteins (HSP) and their cross-reactive proteins, antigenic fragments or HSP-specific antibodies (which indicate insulin-dependent diabetes mellitus, or susceptibility to it. The CBD, has very high affinity for cellulose (including crystalline forms) and chitin (dissociation constant 0.8-1.4 mu M), but has almost no cellulolytic or amorphogenic activities. The CBD binds ove a wide pH range and is not released from cellulose by washing with water
                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                            Detection of a specific analyte by reaction with binding agent fused to cellulose binding domain - and subsequent treatment with cellulose and reaction of insoluble product with a label specific for the analyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                          27-OCT-1994;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                the cbpA procein of Clostridium cellulovorans. It was obtained by PCR amplification (see also AAX2495-3), and was used in the construction of binary vector pCCl, in which cbd was joined to the promoter and signal region of the novel endo-1.4-beta-glucanase cell gene (see AAX24923) of Arabidopsis thaliana. Expression of cbd in transgenic tobacco plants modulated their growth. The cell promoter can provide expression of any protein in elongating tissue. CBD is an example of a cell wall modulation transgene used to alter the structure or morphology of a plant. Transgenic plants of the invention may have altered biomass, growth, yield, greater or less resistance to biodegradation, be more or less digestible by ruminants, have altered cellulose content, larger or smaller leaves, etc., when compared to non-transgenic plants of the

The present invention relates to methods and compositions for cross-linking and/or modifying the properties of polysaccharide materials. The method involves treating the polysaccharide structure with a polysaccharide binding domain (PBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and mechanical properties of polysaccharide materials such as paper, yarns, fibers and textiles, using biological crosslinking agents. The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD

The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains the fine fibers in a slurry therefore resulting in better recovery of raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to methods and compositions for cross-
CC linking and/or modifying the properties of polysaccharide materials.
CC The method involves treating the polysaccharide structure with a
CC polysaccharide binding domain (PBB) fusion protein. The method is
CC used to alter the structural, chemical, physical, electrical and
CC warns, fibers and textiles, using biological crosslinking agents.
CC The polysaccharide containing materials have improved mechanical
CC properties such as wet strengths, durability and elasticity. The PBD
CC which eliminates the sizing step. The use of a biological crosslinker
CC improves the recyclability of paper products. The PBD reagent maintains
CC the fine fibers in a slurry therefore resulting in better recovery of
CC caw materials. The PBD molecules are eluted by strong alkaline conditions
CC content a policy of the alkaline glue used in binding to
                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                            Renilla and Ptilosarcus green fluorescent protein (GFP) nucleic acids and C proteins. The luciferases and GFPs can be used in C bioluminescence-generating systems, assays, screening methods, diagnostic method and articles of manufacture. They can be expressed using c.g. bacterial, yeast, fungal, plant, insect or animal cells. The Renilla cmullerl, Gaussia and Pleuromamma lucifers or Renilla or Ptilosarcus GFPs can be used in e.g. toys, cosmetics, fountains, personal care items, fairy dust, beverages, soft drinks, foods, textile products, bubbles, the or paper products. In particular, they can be used in e.g. squirt guns, personal items, dentrifrices, soaps, body paints, bubble bath, inks, pellet guns, finger paints, foot bags, greeting cards, slimy play material, clothing, bubble making toys, bath powders, cosmetics, body commeters, body powders, body creams, toothpastes, mouthwashes, cospass, body paints, bubble bath, inks, wrapping paper, gelatins, icings, frostings, greeting cards, beer, wine, champagne, soft drinks, ice cubes, teacher, fish and later.

The patent discloses sea pansy (Renilla reniformis) green fluorescent proteins (GFP) and their corresponding polynucleotides. The invention also relates to sequences of the bioluminescence generating system (e.g. luciferase). R. reniformis GFP are used in diagnostic methods and in the production of novelty items such as toys (e.g. squirt gun, pellet gun, toy "Halloween" eggs, toy cigarettes, board/card game toys), finger paints, slimy play material, bubbles in bubble making toys, fishing lures, dolls, sparklers, mayic wand toys, balloons, personal care item (e.g. cosmetic, bath powders, body creams, tooth pastes, mouth wash, soaps, body paints, bubble bath), ornamental transgenic plants, fountain, fairy dust, food (gelatins, icings, frosting, beers, wine, champagne, milk, soft drinks, ice cubes, ice, dryice, beverage), textile (foot bag, clothing) and/or paper product (greeting cards, wrapping paper). The present sequence is a DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Green fluorescent protein; GFP; bioluminescence generating system; luciferase; finger paint; slimy play material; fishing lure; sparkl doll; balloon; personal care item; cosmetic; bath powder; body cree tooth paste; mouth wash; soap; body paint; cramental transgenic pl bubble bath; fountain; fairy dust; food; gelatin; icing; frosting; wine; champagne; milk; soft drink; ice cube; ice; foot bag; beverage, wine; textile; clothing; paper product; greeting card; wrapping

The present invention relates to methods and compositions for cross-CC linking and/or modifying the properties of polysaccharide materials. The method involves treating the polysaccharide structure with a polysaccharide binding domain (PBD) fusion protein. The method is composition of the structural, chemical, physical, electrical and composition proteins of polysaccharide materials such as paper, compositions, fibers and textiles, using biological crosslinking agents. CC The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD creagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker cc improves the recyclability of paper products. The PBD reagent maintains in the fine fibers in a slurry therefore resulting in better recovery of craw materials. The PBD molecules are eluted by strong alkaline conditions nemerate names.

                                                                                                                                                                                                                                                                                                     This invention relates to a method for the protection against infection of a polkilothermic fish by the bacterial pathogen, Piscirickettsia salmonis: The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, particularly polkilothermic fish, against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents a PCR primer used in the cloning and optimisation of the P. salmonis OspA gene. The OspA gene is used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Method for protecting poikilothermic fish against salmonid rickettsial septicaemia and other rickettsial diseases comprises administering a vaccine containing the OspA protein of Piscirickettsia salmonis -
